

DATA CHALLENGE TELECOM

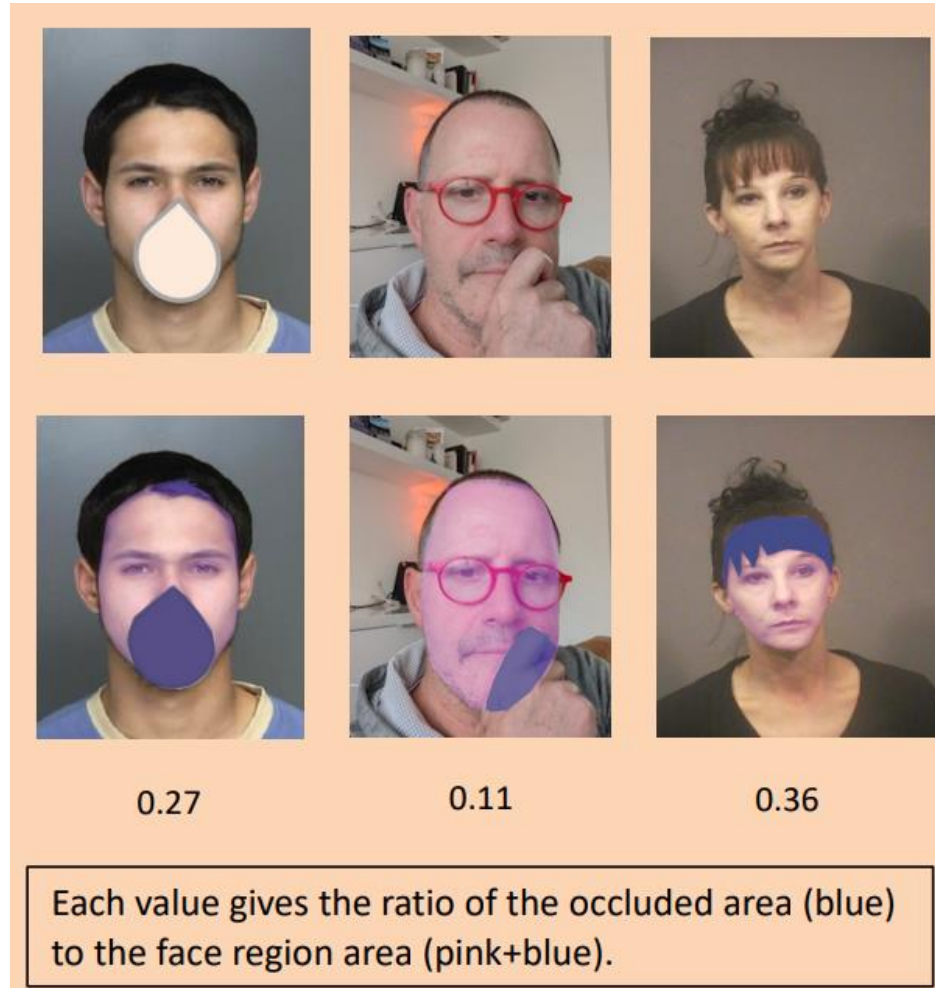

TASK

We provide cropped faces (224x224)

The labels represent the percentage of the face that is occluded

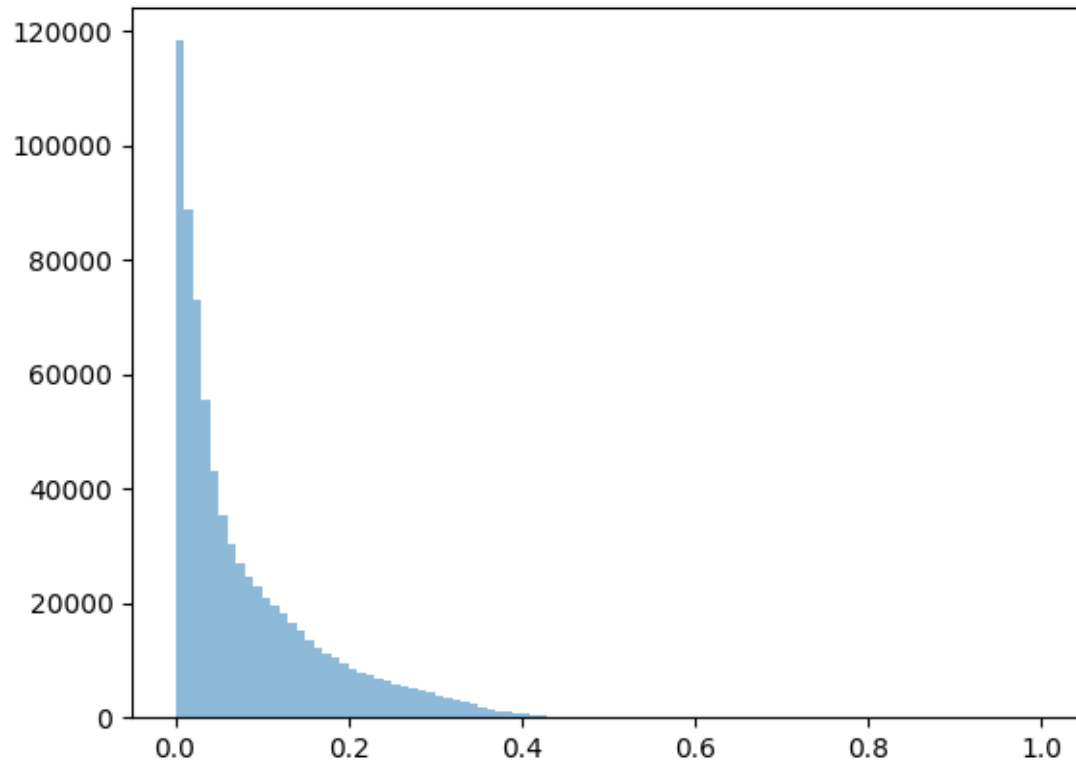

The students need to regress this value

In addition, the gender is given for the train database

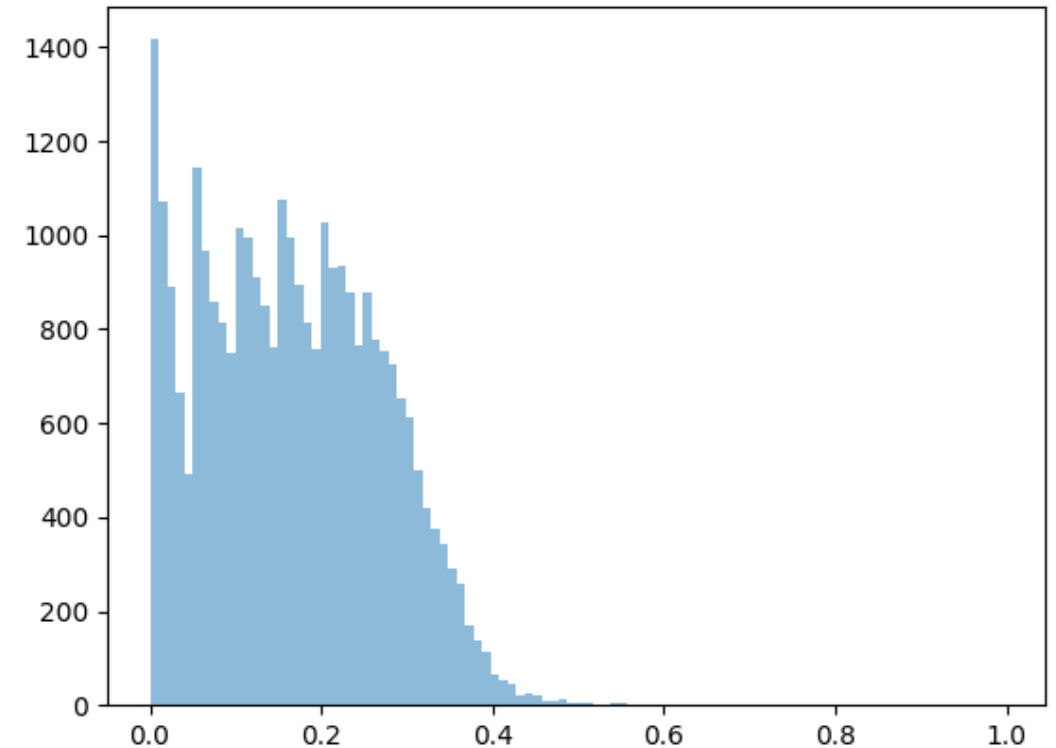

DATABASE

Histogram on train database - FaceOcclusion
752826 images

Histogram on test database - FaceOcclusion
29980 images

METRIC

- › The data is imbalanced → we want to perform also well on highly occluded data so we put a higher weight on them
- › We want to have similar performances on women and men

$$Err = \frac{\sum_i w_i (p_i - GT_i)^2}{\sum_i w_i} \quad w_i = \frac{1}{30} + GT_i$$

$$Score = \frac{Err_F + Err_M}{2} + |Err_F - Err_M|$$
